MONTREAL, TECSYS Inc. (TSX: TCS), an industry-leading supply chain management software company today announced that it has partnered with National Medical

Logistics (NML), a leading supply chain and distribution management consulting firm serving some of the largest healthcare systems in the United States, to provide a unique and powerful logistics solution offering in an effort to increase their penetration of healthcare supply chain networks in the U.S.

NML is an implementation-focused company that provides strategic planning, supply chain consulting and hands-on distribution management services for some of the largest healthcare systems and integrated delivery networks (IDNs) in the United States. NML applies its decades of experience on developing and refining a world-class business model that uses leading edge techniques and processes backed by comprehensive operational, financial and logistical models that create supply chain value.

According to NML principal Tom Seliquini, "Our combined offerings will help to reduce much of the unknowns and risks related to systems requirements and operational readiness and quickens the speed to market for all health care systems."

Typically, the healthcare services marketplace, including hospitals, clinics, nursing homes, home health agencies and school health clinics, has a fragmented supply chain; each entity with separate or disconnected information system and procurement plans. They also have a significant number of manual activities, tying professional healthcare resources in logistics operations with processes not in-keeping with healthcare's quality and professional staff. Healthcare management are looking for logical ways to keep costs in line, such as reducing supplies cost, eliminating duplication and inefficiencies, enhancing security and encouraging standardized processes to maximize the efficiency and cost savings in delivering their services to patients.

"The new combined offerings; TECSYS' market leading healthcare software solutions with NML's expertise in implementing alternative supply chain models,

will provide IDNs with a total, integrated supply chain execution solution, bringing self-distribution models closer to plug and play status and enabling them to substantially reduce cost and improve their supply efficiency in delivering service to patients. Stated Robert Colosino TECSYS Vice President of Business Development and Marketing.

For over a decade, TECSYS has been providing distribution and warehouse management solutions to the healthcare industry; these include Fortune 100 manufacturers and distributors, as well as a number of IDNs and third party logistics providers in Canada and the United States. The Company's product suite EliteSeries for healthcare effectively streamlines business processes that cut across functional areas and consolidates fragmented operations, often replacing multiple legacy systems. As a totally integrated solution suite the EliteSeries speeds up the flow of business activity across the healthcare entities, consolidates information, manages inventory, drives dramatic cost savings, and delivers superior customer service.

About TECSYS

TECSYS is a leading supply chain management software provider that delivers powerful enterprise distribution, warehouse and transportation logistics software solutions. The company's customers include about 1000 mid-size and Fortune 1000 corporations in healthcare, heavy equipment, third-party logistics, and general wholesale high-volume distribution industries. TECSYS shares are listed on the Toronto Stock Exchange under the ticker symbol TCS.
